Annotation: During the globalization period, along with all the convenience for people, brought mass culture. Today, even older ones are embodied in the weakness of the needs in the face of these conveniences. Because the invisible negative consequences of this culture are equally affecting everyone. In particular, we are causing a lot of problems that we use time every day, to connect and use time to the value of time every day, and lacking the culture of time.

Key: Globalization, Internet, Culture, Social Moralism, Law, Cyber Crime

Information is a concept that contains information that contains from it in the country of adaptation. [1]. The concept of culture in the stages of human development is one of the leading factors. There are different forms of culture. In particular, the culture of dress, treatment, nutrition, culture, etc. It also decreases by the Internet culture that our day has become a relevant and global issue of the global concerns themselves together. The word internet means "International data is cleared." But now this concept is not limited to providing and receiving data, but also serves to carry out large amounts of work. Information is a set of all signal that man receives through its senses. When a person lives life, he does not know and deliberately absorb the unnecessary information himself. We now live in such a time that we cannot imagine every day without the Internet. According to the UN, the world will use the 41 billion people in the world. This figure is 12.2 million people in Uzbekistan. Of these, 42% of users are young people under 25 years old. In fact, positive approach, we can also say the Internet on the day of the Internet that we have bestowed on people. But everything has the same notion of the Name. Unfortunately, we cannot achieve our goal by limiting young people, or forbidding a lot of things. Because in Article 33 of the current Constitution, everyone has the right to search, retrieve and distribute any information. The state creates the conditions for the use of the global information network. It is not necessary to restrict the right to the search, receive, distribute the right to distribute the health of the population, and to ensure the rights and freedom of other persons, and other

secrecy, protected by the law, as well as other secretly protected by law. In the scope [2] Especially the concept of cyber crime on the world of the Internet is a global issue of our day. Of course, the law establish strict responsibilities for these crimes. Violation of the rules of information systems expressed in permission of information systems in order to use the information system - will lead to fines a fine of 1,00 per minimum wage. From the Internet from the Internet inaccurate sedatives and people distributing information is spiritually poor. We need to acquire digital knowledge and modern information technologies for development. This allows us to go to the shortest path of rise.

In general, when a dangerous time that is the whole of the world's whole world, it is necessary to be a cautious and vigilant when using the Internet. In this process, of course, adults should be an example to little little ones, not forget the norm in using the Internet. It is also a priority set to young people, inherent in the culture of Oriental culture, to every family, neighborhood and society. Because today, today is a bonatry, intelligent, and more vigilant young people are needed. Every family who is blowing the national spirit in the house grows by the child, with similar beautiful feelings. He breathes special to a friend, parents, Olia, children, friends. Everyone who has reached such things, of course, in the future will be a strong and faithfulness, and it will keep any function before the homeland.
