Annotation

This article provides information about how teachers can impact to school pupils with spiritual and educational work. Spiritual and educational work significantly boosts learning effectiveness by fostering motivation, critical thinking, and holistic development, moving beyond mere knowledge transfer to shape responsible, engaged citizens with strong values, creativity, and a sense of purpose, ultimately leading to better academic outcomes and reduced negative behaviors. Integrating modern tech with person-centered approaches enhances interest and equips students with digital literacy, while a combined effort from educators, parents, and the community ensures a robust moral and intellectual foundation, making learning more meaningful.

Key words

Spiritual work, Creativity, Efficiency, Motivation, Digital literacy, Holistic skills.

INTRODUCTION

The society in which we live is constantly evolving and changing. The modern world educational space is constantly being replenished with new content of knowledge, new qualifications. New spheres of relations are emerging, new specialties that form new disciplines. World higher education is undergoing reform. This led to the search for new forms and technologies of education. Harmonization of higher education in accordance with the requirements of the world space and standards, its development is carried out according to certain principles. This is, first of all, the priority introduction of innovative achievements in education and science. It is known that it is the innovative way of development of society that can ensure the formation of a generation of people who think and work in a new way. As a result, the main attention will be paid to the development of personality, cultural and communicative preparedness, the ability to

independently acquire and develop knowledge, to form information and social skills.

LITERATURE AND REVIEW

Key Roles of Spiritual & Educational Work:

Enhances Academic Performance: Spirituality positively influences academic engagement and achievement motivation, making students more focused and driven.

Develops Holistic Skills: Cultivates discipline (mind, heart, spirit), creativity, imagination, self-understanding, and empathy.

Fosters Critical Thinking: Encourages questioning, analyzing, and synthesizing information, promoting a deeper love for learning.

Builds Moral & Civic Character: Develops strong willpower, active citizenship, responsibility, and ideological immunity against harmful ideas, leading to better social behavior and reduced aggression.

Increases Engagement: A spiritual approach inspires students to seek knowledge for its own sake, not just for grades.

DISCUSSION

Spiritual work is the intentional practice of cultivating a deeper connection with oneself, others, and the divine, involving inner transformation, self-discovery, and service, often through activities like prayer, meditation, reflection, acts of mercy, and letting go of ego-driven attachments to find greater meaning and purpose. It's about internal growth, facing negativity, and aligning actions with spiritual values to foster a more connected and fulfilling life.

Implementation of individual-oriented educational technologies in the effective teaching of the methodology of educational work in the spiritual and moral education of students of pedagogical educational institutions. Spiritual and moral education plays a special role in the process of individualized education. After all, all components of the moral-educational upbringing structure are focused on the person, and the student body is at the center.

In the process of preparing future teachers, it is important to educate students in each discipline and to educate them spiritually and morally. In particular, the purpose and objectives of the methodology of educational work for students that based on the methodology of educational work, the content and nature of national education, methods and forms of upbringing, the organization of the educational process, the activities of the classroom leader, provides an overview of the activities, ways to increase the effectiveness of the educational activities of the class leader, and the classroom hours, to create and educate the classroom community,

students will learn how to form a community of students, acquire knowledge and skills about the educational process, and the skills to organize educational work. Because today's student of pedagogical higher educational institutions is developing the younger generation in all respects

RESULTS

Methodological approaches in the education of students in the moral and spiritual education of the students were used with the use of personal, active and competent teaching and educational technologies. Challenges and meetings with innovative teaching technology, training method "Step by Step", "Panorama", "Contact" - team storytelling training, role-playing games, Case Study technology, Assessment, FSMU, They used interactive methods such as SWOT-analysis in both audiences and out-of-class forms. Methods of educational work were used in the course of lectures, seminars, as well as audio and audiovisual resources, electronic educational resources in the process of independent education, public education activities. In it, knowledge, skills and abilities of students on spiritual and moral education were defined on the basis of cognitive, process and outcome criteria. Effectiveness of the system of development of students' moral and ethical education is determined on the basis of exemplary, good, satisfactory levels. If the result is low, corrective action, that is, individual psychological work with the student. When the results are high, it is evidenced by the training of specialists with socio-cultural competence.

Pedagogies have common methods of upbringing: methods for shaping social consciousness; methods of formation of experience of social behavior in the course of activity; training and teaching methods; methods of self-education; incentives and punishments. The following methods have been widely used to educate students on spiritual and moral education: to organize meetings and debates; conducting competitions and educational activities, technologies of personal education.

CONCLUSION.

In conclusion, the most recent achievements of science in this area should be used to bring the spiritual and educational upbringing to the requirements of the time and to improve the methodology of spiritual and moral education. In order to provide spiritual and moral education of students, an electronic textbook on "Methods of educational work" was prepared. The electronic textbook provides interactive communication between teachers and students based on information materials on the spiritual and moral education of students and on the methodology of educational work. The teacher uses the electronic textbook on the subject "Methods of educational work" to develop the knowledge, skills and abilities

related to spiritual and moral education in science can be used for. At the same time, tests and questionnaires to determine the level of learning by the source of the study were prepared, on the basis of which the student learned and brought up the moral and ethical concepts.
